**Alphabond 300 in its new 12.5 kg packaging with extended shelf life elevates your inventory management**

Almatis, a leading provider of high-performance specialty materials, is pleased to announce a significant improvement to one of its flagship products, Alphabond 300. In response to customer needs and industry trends, Almatis will now offer Alphabond 300 in plastic bag packaging, doubling the product's shelf life from 1 year to a 2 years.

The transition to plastic bag packaging introduces 12.5 kg bags, replacing the existing 25 kg bags. The new packaging will be available in three convenient pallet sizes, providing flexibility and adaptability to diverse customer requirements:

- **4005369 ALPHABOND 300; 40x12.5KG PB**
- **4005371 ALPHABOND 300; 76x12.5KG PB**
- **4005381 ALPHABOND 300; 900KG SB DS**

This transformation not only extends the shelf life of Alphabond 300 but also enhances your company's inventory management capabilities. The smaller plastic bags offer a longer storage duration without compromising the product's properties, ensuring that you have more control over your stock levels.

This shift aligns seamlessly with Almatis' commitment to sustainability. The longer shelf life of Alphabond 300 reduces the frequency of product turnover, minimizing waste and supporting a more sustainable supply chain. By offering a product with an extended shelf life, Almatis aims to contribute to resource conservation and environmental responsibility.

Customers can expect to receive Alphabond 300 in the new plastic bags starting in December 2023. This strategic move is part of Almatis' ongoing efforts to integrate sustainability into every aspect of its operations, providing customers with high-performance products while minimizing environmental impact.

For further information or inquiries, please feel free to reach out to your dedicated Regional Account Manager, who will be happy to assist you during this transition.

Almatis continues to innovate and invest in solutions that empower our customers, and the introduction of smaller plastic bag packaging for Alphabond 300 is a significant step forward in our commitment to excellence and environmental responsibility.
